

APT 4900 - UI Progress Report

1. Student Details

- **Project Name:** U-Plan: Intelligent Study Planner for University Students
- **Student Name:** Tunga Greta
- **ID:** 666167

2. Completed UI Features

Navigation

The system includes a sidebar-based navigation menu that allows users to easily switch between different sections such as Dashboard, Courses, Assignments, Schedule, and Analytics.

- Sidebar navigation implemented
- Responsive design (sidebar hidden on smaller screens)
- Clear page structure and routing

Forms & Inputs

The system provides interactive forms for user input.

- Login form with email and password fields

- Course and assignment input forms

Layout & Structure

A consistent layout structure has been implemented across all pages.

- Grid system used for dashboard cards
- Proper spacing and alignment using Tailwind CSS
- Fixed header (navbar), sidebar, and scrollable content area

Interactive Elements

The UI includes several interactive components:

- Buttons with hover effects
- Primary and secondary button styles
- Dropdowns and checkboxes in assignment management
- Clickable navigation links

Visual Design

The application follows a clean and minimalist design approach.

- Consistent color scheme (white, gray, blue accents)

- Clear typography hierarchy (headings, subheadings, body text)
- Use of cards and shadows for separation
- Simple icons and visual indicators

Accessibility

Basic accessibility considerations have been implemented:

- Readable font sizes and spacing
- Color contrast between text and background
- Keyboard-friendly navigation (links and buttons)
- Alt text planned for future implementation

Feedback & Notifications

The system provides feedback to user actions.

- Success and error alerts (e.g., “Course added successfully”)

- Loading indicators (basic text feedback)
- Visual cues such as hover effects and status labels

3. Pending / In-Progress Features

- Full integration with backend APIs
- Advanced form validation
- Search functionality implementation
- Improved mobile responsiveness

4. Challenges & Solutions

Challenge 1: Designing a Clean and Minimal UI

- Difficulty balancing simplicity with functionality
- **Solution:** Used Tailwind CSS utility classes to maintain consistent spacing and layout

Challenge 2: Responsive Layout

- Ensuring UI works on different screen sizes
- **Solution:** Used responsive Tailwind classes (e.g., md:grid, hidden md:block)

Challenge 3: Component Reusability

- Avoiding repetitive UI code
- **Solution:** Structured components into reusable Navbar and Sidebar

6. Next Steps

Planned Improvements

- Fully integrate frontend to backend APIs
- Enhance analytics visualization (charts)
- Improve UI Responsiveness

Additional Features

- Notifications system
- Profile page

Project Completion Status

- **Estimated completion: 75% complete**
